Let's Get Started with EQ8

Skill Level: Beginner leading up to Intermediate

Whether you're new to Electric Quilt software or EQ8, or someone who has used the software (but does not feel confident as a designer with EQ8), start at the beginning for an overview and review and follow a progression while learning how to navigate through the program and how to use the various designing features. Design a traditional quilt in a straight or on-point layout, retrieve blocks from the block library, color the quilt with solid colors and/or fabrics, add borders, print patterns and estimate yardage.

Moving on, learn to create custom quilts with blocks of different sizes, medallion quilts, and panel quilts. Create new blocks in Easy Draw (for pieced blocks) as well as edit blocks from the block library to create new blocks. Explore drawing applique and motif blocks in PolyDraw. Build My Favorites Block Library to keep your designs for future reference.

Spend a day designing custom quilts using the Layout Library and create a custom quilt from a block drawing you do yourself. Consider ways your quilt design could be interpreted as a modern quilt or a traditional one.

Barb Vlack, EQ8 Freelance Educator

Barb is an expert user of EQ8 with many years of experience. She has taught quilting internationally and is a popular teacher of EQ across the United States. She is frequently on the faculty of the International Quilt Festival in Houston, Quiltweek for AQS at various venues, other national conferences and at quilt guilds. She is a published author of books on designing quilts in Electric Quilt software which supplement manuals for EQ versions 3 to 8. Barb designs all her quilts in EQ before making them in fabric and is most satisfied with the accuracy of the patterns she can print from the program.
